# **1** Safety Information

Thank you for choosingRaycus fiber laser. This User Guide provides important safety, operation, warranty and other information. Please read it carefully before you use this product. In order to ensure safe operation and optimal performance of the product, please follow the warnings, cautions, operating procedures and other instructions accordingly.

# 1.1 Symbols Used in this User Guide

**WARNING:** Refers to a potential hazard that may leads to a personal injury or death.

**CAUTION:** Refers to potential a hazard that may leads togeneralpersonal injury or product damage.

# **1.2 Laser Classification**

This series of lasers are classified as a high power Class 4 laser instrument according to the European Community standards EN 60825-1, clause 9. This product emits invisible laser radiation at or around a wavelength of 1080 nm, and the total power radiated from the laser is greater than 12000W (depending on model). Direct or indirect exposure of this level of light intensity may cause damage to the eyes or skin. Despite the radiation being invisible, the beam may cause irreversible damage to the retina and/or cornea. Appropriate and approved laser safety eyewear must be worn all the time while the laser is operating.

# 1.3 Safety Labels

The position of the safety labels on products varies depending on the model of the continuous-wave fiber laser, as shown in Figure 1:

Figure 1: Safety Label Locations of RFL-C4000S-CE

These safety labels include warning labels, apertures through which laser radiation is emitted and labels of certification and identification, etc. Specifications of these labels are as follows:

	English label (Take 500W for example)	
1.Aperture Label	2.Class 4 Laser Product	3.Class 2M Laser Product Label for Guide Laser
CEZ	MARKET CONSTRUCTION	
4. CE Compliance	5. Identification Plate	6.Laser Radiation Hazard Label
7.Electrical Hazard		

# 1.4 Optical Safety

Any dust on the end of the collimator assembly can burn the lens and damage the laser.

**CAUTION:** If the output of the device is delivered through a lens with an anti-reflection coating,make sure that the lens is of good quality and clean.

# **1.5 Electrical Safety**

a) Make sure yourproduct is grounded through the PE line of the AC power cord. The

grounding must be firm and reliable.

**WARNING:** Any interruption from the protective earth will electrify the enclosure, which may result in personal injury.

b) Make sure that the correct voltage of the AC power source is used.

**CAUTION:** Failure to connect the correct voltage could damage the product.

# 1.6 Other Safety Rules

- a) Never look directly into the laser output port when power is supplied to the laser.
- b) Avoid using the laser in a dim or darkened environment.
- c) If this device is used in a manner not specified in this document, the protection provided by the device may be impaired and the warranty will be voided.
- d) There are no operator serviceable parts inside, and all maintenance must be performed in Raycus or by qualified Raycuspersonnel. Do not try to remove covers, or electrical shock may be caused, and warranty will be void.

# 2 **Product Description**

#### 2.1 Features

Compared with traditional lasers, Raycus CW fiber laser has higher efficiency electric-optical conversion, lower power consumption and excellent beam quality. The fiber laser is compact and ready to use. It can be used as a stand-alone unit or easily inserted into user's apparatus.

#### **Main Features:**

- a) Excellent beam quality
- b) High quality fiber output
- c) High Power Stability
- d) Continuously tunable output power, quick switching response
- e) Slow rise and slow fall, Waveform editing
- f) Maintenance free operation
- g) High wall plugefficiency

#### **Applications:**

- a) Cutting, Welding
- b) 3D Printing
- c) Scientific research

# 2.2 Package Contents

Please refer to the packing list accompanying the shipment to check actual items included.

#### 2.3 Unpacking and Inspection

Raycus CW fiber laser is shipped in a package designed to provide maximumprotection. Upon delivery, please inspect all packaging for evidence of mishandling or damage. If you find any evidence of mishandling, please save the damaged material and contact the shipping agent and Raycus immediately.

Remove all the contents from the packing case. Take extra care when removing the unit out of the packing case to ensure that thefiber optic cable is not twisted, hauled or damaged. A comprehensive packing list is included with the system documentation. Check all items against the list and contact Raycus immediately if there is any missing item or evident damage to the unit. DO NOT attempt to install or operate the laser, if there is any evident or suspected damage to the unit.

It is recommended to keep the packing materials, as they will be necessary if you ever need to ship the unit back for service at a later date.

**CAUTION:**The fiber optic cable and output head is precise optic instrument, any vibration or impact to the output head, and twist or excessive bend to the cable will damage the instrument.

# 2.4 Operation Environment

The basic operation conditions are listed in the table below:

Model	RFL-C4000S-CE		
Supply Voltage(V)	380±15%Vac, 50/60Hz		
Supply Capacity(kW)	>15		
Installation Requirements	Install on flat surface, no vibration or impact		
Ambient Temperature(°C)	10~40		
Relative Humidity(%)	30~70		

Table 2 Basic Operation Conditions for the Laser

#### Warning:

- a) Ensure reliable grounded before using the laser.
- b) The laser output is connected to the output cable. Please check the laser output carefully to prevent dust or other contamination. Use special paper when cleaning the laser output lens.
- c) If the laser is used in accordance without the method specified in this manual, the laser may be in abnormal working state and cause damage.

- d) It is strictly forbidden to install the laser output when the laser is in operation.
- e) Do not look directly into the laser output. Be sure to wear protective glasses when operating the laser.

Do not expose this product to high humidity (>95%)
 Do not let this product work below the ambient dew pointtemperature.(see Table 3)

Table 3TheConstant Dew Point Table									
	AMBIENT DEW POINT								
Room			Ma	ximum R	elative hu	imidity			
Temperature(°C)	20%	20% 30% 40% 50% 60% 70% 80% 90% 95%							95%
20	-3.5	2	6	9	12	14.5	16.5	18	19
25	0.5	6	10.5	14	16.5	19	21	23	24
30	4.6	10.5	15	18.5	21.5	24	26	28	29
35	8.5	15	19.5	23	26	28.5	31	33	34
40	40 13 20 24 27.5 31 33.5 36 38 39							39	
	Laser operating temperature range								

Green area: The dew point temperature is 22°C that is lower than the laser cooling water temperature, which can be used safely;
 Red area: If the dew point temperature is higher than 22°C and exceeds the laser cooling water temperature by 22°C, there must bedew condensation, and measures must be taken.
 Measure 1: Connecting clean and dry air from CDA port to reduce relative humidity, works for 10-15 minutes in standby mode;
 Measure 2: Installing cabinet air conditioner to reduce ambient temperature.

9

# 2.5 Precautions for Use

- a) Before supplying the power to the device, make sure that the correct voltage of the AC power source is used. Failure to connect power source correctly will damage the device.
- b) Failure to follow the instructions may cause malfunction and damage to the device, such damage is not covered by warranty.
- c) It is very important to ensure the cleanness of the calibrated laser output head, otherwise it will cause irreparable damage to the laser.
- d) Please inspect the output head carefully for dust or other contaminations. Use appropriate lens paper to clean it if necessary. Do not touch the output lens at any time; as well as remember to cap the output head when it is not in use, and make sure the cap is clean.
- e) Failure to follow the specified instructions may result in the loss of laser power, and such loss will not be covered by the warranty.

# 2.6 Specifications

Number	Index	Condition	Minimum value	Standard value	Maximum value	Unit		
Fiber technical index								
1     Operation Mode     Nominal       0     Output     Continuous Wave / Mo       Power     Power

# **3** Installation

# 3.1 Dimensions

Figure 2 shows dimensions of RFL-C4000S-CE.

Figure 2a) Frontand Rear panel view(unit: mm)

Figure2b) Top and Side view(unit: mm)

# 3.2 Output Head and Installation

The laser outputheadof RFL-C4000S-CEis thestandard QBH interface. The specific appearance and dimensions are shown in Figure 3 above. Compared with other models, the size of the protective end cap of the fiber delivery cable of this model is lengthened.

Figure 3 Dimensions of the QBH fiber delivery cable (unit:mm)

- CAUTIONS:
- Inspect the output lens before installing the output head to the processing head. Clean the output lens if necessary.
  - It is strictly prohibited to disassemble the output head by personnel not approved by Raycus, or the warranty is void.

# 3.3 Cooling Requirements

# Table 5 Cooling Requirements

Model	RFL-C4000S-CE		
Cooling Capability(W)	>15000		
Minimum Flow(L/min)	60		
Maximum Pressure(Bar)	7		
Pipe Inner Diameter(mm)	25		
Water temperature of coolingsystem(°C)	22±1°C		

a) The water temperature setting of cooling system:

# 22±1℃

b) Cooling system filter access requirements:

When the water quality of the laser cooling system is poor (more impurities), the laser water path is easy to be blocked, causing flow alarm or high temperature alarm, resulting in laser shutdown. In serious cases, the laser waterway will be scrapped. Therefore,

RFL-C4000S-CE laser is equipped with water inlet filter module, as shown in Figure 4.

Figure 4 The inlet filter module

When the laser is installed and used, firstly connecting the water inlet filter module with the water outlet of the customer's on-site cooling water system according to the water flow direction indicated by the arrow in Figure 4, and then connect the water inlet filter module with the water inlet of the RFL-C4000S-CE laser, as shown in Figure 5.

Figure 5Thewater inlet filtration module is connected to the watercooling system

When the laser is in use, cleaning the Y-type filter of the inlet water filter module periodically according to the water quality of the cooling water system (openning the nut cover of the Y-type filter, taking out the filter screen, cleaning it, reinstall it, and tightenning the nut cover), it is recommended that the cleaning frequency be no less than once a week.

- c) Cooling water requirements:
  - 1) It is recommended to use purified water.
  - In order to prevent mould growing that may lead to pipe blockage, we recommend to add alcohol about 10% of the total volume.
  - 3) If the product is used in an environment that ambient temperature is between -10 ℃ and 0 ℃, we recommend to use 30% alcohol, and replace it every two months.
  - 4) If the product is used in an environment that ambient temperature is below  $-10 \,^{\circ}\text{C}$ , please to use dual-system chillers (with heating function) and ensure uninterrupted operation of the cooling system.
- d) Requirements for output cable cooling system:
  - 1) Rate of liquid flow: 1.7-2.0 L/min;
  - 2) Pressure of liquid flow: < 0.6 MPa at the inflow;
  - 3) Type of liquid exchange junction: SMC MS-5H-6:
  - 4) Type of tube: outer diameter6; inner diameter4;
  - 5) Direction of cooling liquid: unidirectional; connect the tube with the water-pipe strictly according to direction shown on the layer of the tube;
  - 6) Type of liquid: de-ionized water, condensed water, pure water;
  - 7) PH value of liquid: 5.5-9;
  - Filter is needed for the cooling system, and the size of the solid residual practical should be within 100um;
  - 9) Maximum temperature of liquid: 45°C:
  - 10) Minimum temperature of liquid: greater than the saturated dew-point  $5^{\circ}$ C;
  - 11) Additive to the liquid: satisfies the requirements of PH value and size of solid residual practical as above;

- 12) Radius of the bending of the armored pipe: off-work state (i.e. transportation and reservation): minimum radius of bending  $\geq 20$  cm; in-work state: minimum radius of bending  $\geq 30$  cm;
- 13) Long-term vibration < 2 G; Impact action < 10 G.
- e) Other requirements for chiller:
  - 1) When starting the cooling system for the first time, check the entire water system and the joint for water leakage. The external water pipe must be installed and connected according to the inlet (IN) and outlet (OUT) by the laser. Otherwise, the laser may not work properly.
  - 2) If you will not use the laser for a long time, water must be emptied from the product, and then both the inlet and outlet must be blocked with the nuts we provide. Failure to do so may lead topermanent equipmentdamage.

**CAUTION:** Please set the water temperature in strictly accordance with the requirements above. Too low temperature may lead to condensation on the laser module and the output cable. This can cause serious damage to the equipment.

**CAUTION:**Please clean the water inlet filter module in time. If the water inlet filter module is blocked, the laser flow alarm or high temperature alarm will be triggered.

**CAUTION:** Make sure that the water temperature reaches the set point and the cooling system is working well before you start the laser. [summer:  $22\pm1^{\circ}$ C; winter:  $22\pm1^{\circ}$ C]

# **3.4 Installation Procedure**

- a) Place the product inan still and stable position.
- b) Check if the power supply has the correct voltage (See Table 4 for the laser model and corresponding input voltage ), and the earth line is connected, make sure it is firm and reliable.

- c) Connect the power cable and control cable to the product when power supply is OFF.
- d) Insert the water pipes into the inlet and outlet.
- e) Check the output head and clean it if necessary. This procedure must be performed by personnel of Raycus or authorized by Raycus. Make sure the environment is clean, or the output cable may be contaminated.
- f) Prevent the delivery cable from treading, pinching or excessive bending during installation.
- g) During the installation and disassembly process, please take care to handle the laser output head gently, avoiding any shock.
- h) In the installation of laser output cable and output head process, please make sure that the surrounding environment is clean, otherwise it may pollute the output head (do not use fans, which actually may bring more dust).
- i) The minimum bending radius of the output fiber cable of the laser should not be less than 20 cm under the non-working conditions, and the minimum bending radius should not be less than 30 cm when the laser is working.

# CAUTION:

 All the cables can only be connected when power supply is OFF. Hot plug may damage the laser.

# CAUTION:

- Make sure the aperture and the cavity of the processing head is clean.
- Keep the protective cap properly, prevent it from contamination; Or the aperture will be contaminated when capped.

# 4 Using the Product

Please use the correct the latest PC software and the relevant manual.

#### 4.1 Front Panel

Figure 6 shows the front panel of RFL-C4000S-CE:

Figure 6 Front Panel of RFL-C4000S-CE

- a) **POWER:**Control system power indicator light, when the red light is on, it means that the laser is powered on.
- b) LASER: The laser is emitting light normally. When the green light is on, it means that the laser is emitting light.
- c) ALARM: Alarm indication, when the yellow light is on, it means that the machine has an alarm.

# 4.2 Rear Panel

Figure 7 shows the rear panel of RFL-C4000S-CE:

Figure 7 Rear Panel of RFL-C4000S-CE

- a) AC INPUT: The socket for supply source input that can only be mated with the plug on the power cord we provided (See Table 4 product technical parameters for laser model and corresponding input voltage). Please use only the enclosed power cord provided by Raycus.
- b) CTRL-INTERFACE: Control interface, CTRL-INTERFACE interface (DB-25), multi-function multiplex interface, users can set control mode, input analog voltage signal, modulate 24V signal, and it is also an alarm signal output interface.
- c) RS232: Provide remote control and fault information storage of the laser.
- d) WATER: Pipe connectors, the inlet and outlet for cooling water to flow in and return.(See Table 5 for the laser model and corresponding water pipe size for cooling system requirements)
- e) ETHERNET: Ethernet interface. It can provide remote control and storage alarm information for the laser.
- f) CDA: Dry air inlet.

# 4.3 Power Connection

**CAUTION:** Before connecting the product to AC supply source, you must check for sure that the AC supply you will apply is in accordance with the specifications provided in Table 2 or 4.

# Table 6Power Connection Requirements

Model	RFL-C4000S-CE
Supply Source	380±15% V AC 50/60Hz
Power Cord	

One End of Power Cord	5 wires, the diameter of single wire is 4mm <sup>2</sup> ,			
One End of Power Cord	wires labeledL1, L2, L3and PE			
Sign Description	L1, L2, L3-> Phase Line,			
Sign Description	PE-> Protective Earth			
	L1, L2, L3->Phase wire, PE->Protective ground wire (one PE wire			
Note	is required to be connected to the ground wire of the circuit breaker,			
INOLE	and the other one is connected to the equipment ground wire to			
	ensure that the laser is fully grounded)			

# 4.4 Interface Definitions

# 4.4.1 CTRL-INTERFACE Definitions

The CTRL-INTERFACE(DB-25) is for laser control, the designation and definition is below:

Figure 8 Diagram of CTRL-INTERFACE

PI N No	Name	LineMark	Туре	Level	Drive Current	Typical Respon se Time	Description		
1	Interlock 1A	ITL-1A					"EN954-1"		
2	Interlock2A	ITL-2A	Contact				or"ISO13849-1		
3	Interlock2B	ITL-2B	Closure	24Vdo	<10m A	<500m	Cat.3PLd".		
4	Interlock lB	ITL-1B	Input		24Vdc <10mA			S	Passive contact, not connected to external voltage or grounding.

22	Laser Alarm	S-ERR	Digital output	24VdC	> 10mA	120ms	High=Alarm status
23	Power started	POWER	Digital output	24VdC	>	120ms	High= The main power

					10mA		supply is started
24	Laser emission	LASER	Digital output	24VdC	>10mA	100ms	High=Laser is emission

• Caution: Please check the control voltage level and ensure that the level is in accordance with the requirements. Over voltage and voltage ripple may damage the product.

The Service Security Interface is pin 1-4 and pin2-3, of CTRL-INTERFACE. If the pin 2-3

and pin 1-4 are disconnected, the laser will immediately stop emitting light, and the laser Ready

signal output will change to low level. Be sure to short-circuit pin 2-3 and pin 1-4 before using

the laser. If it is not short-circuited, the laser will display InterLock alarm after power-on.

• Interlock interface must not be connected to active signal, otherwise it will cause interface damage and laser alarm.

# 4.4.2 TCP/IP Interface Configuration

Thedefault IP address of this product is 192.168.0.10, only supporting UDP communication.

The laser listens for connection on port is 8098, and the command must be sent in a single data

string.

PIN	FUNCTION	DESCRIPTION
1	TX+	TRANSMIT+
2	TX-	TRANSMIT-
3	RX+	RECEIVE+
4	N/C	NONE
5	N/C	NONE
6	RX-	RECEIVE-
7	N/C	NONE
8	N/C	NONE

Table 8 Thepin definitions of Ethernet interface

For better communication stability, recommend to use this interface first.

Table 9The default IP address of the laser

The default IP address of the laser					
IP address	192.168.0.10				

Subnet mask

#### **Steps of Ethernet connection:**

- a) Open "Local Connection" on your computer, and then click "property";
- b) Select "Internet Protocol Version 4 (TCP/IP 4);
- c) Click the "Property";
- d) Check "Use the following IP address:" to manually assign an IP address;
- e) Manually assign an IP address is 192.168.0. x (x cannot be 10, because 192.168.0.10 has been assigned to the laser ), and assign a subnet mask address. The default is 255.255.255.0;
- f) Click the "OK" button to confirm the settings and exit. The IP address is different from the default gateway, see Figure 9.

#### 4.5 Steps of Installation

- a) Carefully takeout the laser from the box and move it to the installing position and then lock the casters;
- b) Remove the output cable protective cap and check the output lens for dust with strong light and clean it if necessary, then cover the output cable protective cap;
- c) Install the output cable on the processing equipment according to the actual situation (install the output head cooling water pipe at the same time), pay attention to the output cable and head, then remove the protective cap and confirm that the output lens is clean and install the output head;
- d) Connect cooling water pipe;
- e) Connect the control line and power according to the control mode.

#### 4.6 Steps of Starting

It is determined that the air switch is disconnected, and all electrical connections must be completed before the laser is powered on;

- a) Make sure that the pins the 24-pin are closed;
- b) Turn on the chiller and check leakage. If there is no water leakage, turn off the chiller and wait for the laser to turn on;
- c) Turn on the air switch ;

#### 4.7 Functions of the clientware

The RFL-C4000S-CE clientware communicates with the main control board through UDP when it is working. Through the background program running in the software and the human-computer interaction operation, the laser parameters are read and set and the control functions are realized. The interface displayed by the software is divided according to functional categories, including control, alarm, about, language selection, authorization, working mode selection and other pages.

Figure 11Theclientware interface

#### 4.7.1 The control interface

The control interface is the content displayed on the first page after opening the clientware, including the user's most commonly used status signal, laser parameter setting and laser control related functions.

Control abnormal laser reset: Click the reset button to run the abnormal laser reset command.

Guide laser: the guide laser is turned on or off in the internal control state of guide laser. After the guide laser is turned on or off, there will be changes in the guide laser state on the software.

Guide laser external control: turn on the guide laser external control or turn off the guide laser external control. After turning on and turn off the guide laser external control, there will be changes of the guide laser external control state in the software. If the current red external control state, then disable the red control button.

Control laser parameters: Optical output parameters include power, frequency, pulse width, and duty cycle. The communication between the software and the main control board requires only power, frequency, and pulsewidth. The duty cycle can be calculated from the pulse width and frequency, and the pulse width can also be calculated from the duty cycle and frequency. During the software operation, the frequency and duty cycle will be changed synchronously with the pulse width, and the duty cycle will also be changed synchronously with the frequency and duty cycle. The output power can be an integer in the range of [0,100]. The frequency can be set to a decimal in the range of [0,2000]. The duty cycle can be set to a decimal in the range of [0,100].

Control light emission mode: light emission related modes include AD mode, external enable, external modulation mode, and internal modulation mode. You can individually control the opening and closing of each mode, and display the current status of each mode. After the AD mode is turned on, the optical power is controlled by an external signal, and the power setting

function of the software should be set to a disabled state. When the external modulation mode is turned on, the frequency, pulse width and duty cycle are controlled by the external modulation signal, and the function of the software to set the frequency, pulse width and duty cycle should be set to the disabled state.

Control the light: control to turn on or off the laser emission or laser enable. Only when the laser has a ready signal, can it be controlled normally, otherwise the buttons for turning on and off the laser are set to the disabled state. When the external control light enable is turned off, and the external modulation mode or internal modulation mode is turned on, the "laser enable" is displayed, otherwise, the "laser emission" is displayed.

Status display: Including emergency stop, laser enable, Interlock logic normal, Interlock1 closed, Interlock2 closed, power ramp up and down, program mode, program execution, program execution completed, program execution abnormal and other most commonly used laser states, and machine Internal ambient temperature, internal ambient humidity, dew point, external 0-10V, light output frequency, light output duty cycle, light pulse width, laser water flow, output optical cable water flow and other data. These status and data refresh time intervals should not exceed 300ms.

Laser usage time display: including today's turn-on time, today's light-emitting time, cumulative turn-on time, and cumulative light-emitting time.

#### 4.7.2 The alarm interface

All the alarm information of the current laser is displayed on the alarm interface, and the alarm information is updated in real time.

	<b>0</b> 出光	<b>%</b> 功率[%]	0.00 kW 出光功率[kW]	<b>255. ℃</b> 激光器温度[°C]	Power	Ready	Alarm	Emission
空制	日志	主控模块						
序号		时间	故障类型	故障信息				
			读取故障历史记	R. (	清除故障历史记录	ŧ		

Figure 12The alarm interface

#### 4.7.3 About

The laser time, model, serial number, master control serial number, key version number and system information are displayed in the interface, when the about interface is opened, the upper computer software reads them from the master control module once.

Figure 13 The about interface

#### 4.7.4 Language Selection

In the language selection interface, you can set the language used by the software. After selecting the language and clicking OK, you do not need to restart the software, automatically convert the content displayed in the software into a language, save the currently selected language to the configuration file, and display it according to the last set language when starting

the software next time.

选择	语言
选择语言	~
确定	取消

Figure 14 Language selection interface

# 4.7.5 Authorization

The authorization interface is used to control the limited time lock of the laser, when the authorization interface is opened, the machine code, laser lock time and lock time are loaded once, the laser lock time is Raycus's limited time lock for integrators, and the lock time is for the integrator to end customers. Limited time lock. In the authorization interface, only Raycus' authorization code can be set, and the function of calculating the authorization code is implemented in the server and has nothing to do with the host computer software. The authorization code used by the integrator can be generated in the authorization interface.

#### 4.7.6 The Mode Selection function

Select the operating mode of the software, including monitor mode, control mode, diagnostic mode, and debug mode.

Monitor mode: The monitor mode is selected by default when the software is opened. The most commonly used and concerned information is displayed on the software interface to avoid the interference of too much information to the user. The monitor mode can be used without password.

Control mode: The control mode adds the function of the operable control interface on the basis of the observation mode, and the password is required to enter the control mode.

Debug mode: On the basis of diagnostic mode, the parameter setting interface is added. Only Raycus debug engineers can enter the encryption mode.

Diagnostic mode: When a laser fails to diagnose remote after -sales, or the integrated dealer needs to understand more status information of the laser, you can enter the diagnostic mode.

#### 4.7.7 Main control module

The main control module contains all states, alarms and system parameters of the main control module. The status and alarm information are automatically refreshed. Only when the currently selected page is in the main control module, the upper machine software will automatically read and refresh status and alarm information information information. , Reduce the frequency of communication and avoid too many resources to occupy the main control module.

# 4.8 Control Modes

The laser selects AD mode, external control, internal modulation mode and external modulation mode through the upper machine interface.

# 4.8.1 Control mode wiring diagram

# 4.8.2.1 Internal control mode

# Figure19 Internal control wiring diagram mode

Operation method:

- a) Short connection of 8, 9 pin on the 24 -pin of 24 stitches (power on the control board);
- b) Open the air, the panel "POWER" indicator lights;
- c) Open the upper machine software and close all the external mode (turn off the red light external control, external envelopes, external AD and external modulation);
- d) Click the red light button to view the red light;
- e) Set out the light parameter;
- f) Click "laser ON".

# 4.8.2.2 Internal/external modulation modes for power and communication

Figure 20 Wiring diagram of internal power control and external signal control Operation method:

- a) Shortconnect the 8 and 9 pins on the INTERFACE 24 pins (the control board is powered on);
- b) Open the laser clientware;
- c) Click "the guide laser ON" button to view the guide laser;
- d) Disabling the AD mode and the external envelopes.
- e) Waiting "Ready";
- f) Setting laser power parameters;
- g) When the duty cycle of the internal output frequency of the laser is set, set the output frequency/duty cycle/pulse width; (the output light is determined by the modulation signal of pin 15.16 and the output frequency and duty cycle set by the upper computer

software); the internal output frequency of the laser is not required When the duty cycle is used, the default setting parameters are that the frequency is 100Hz and the duty cycle is 100%.

h) Modulation signal (15, and 16-pin) provide a high level to turn on the laser.

# 4.8.2.3 Power communication setting parameters in the external control mode, external

modulation, external envelopes

Figure 21 In the external control mode, the power internal control, out -of -light external control,

and the external enable wiring chart

Operation method:

- a) Shortconnect the 8 and 9 pins on the INTERFACE 24 pins (the control board is powered on);
- b) Open the laser clientware;
- c) Click "the guide laser ON" button to view the guide laser;
- d) Turn off the AD mode, and opening external enable mode 、 external modulation mode;
- e) Waiting "Ready";

- f) Interface 24 stitches on 18 pins input rising edges;
- g) Setting laser power parameters;
- h) When the internal output frequency occupation ratio of the laser is required, set out the light frequency/duty cycle/pulse width; (out of the output of the light and the output of the output of the 15.16 -pin and the output ratio of the upper machine software); no internal output inside the laser is required When the frequency occupation ratio, the default setting parameter is 100Hz and the duty cycle is 100%.
- i) 15, 16 -foot adjustment signal output high level to turn on laser.

4.8.2.4 In the external control mode, the power simulation amount is set in external settings, external modulation mode, internal control enable enable

Figure 22 In the external control mode, the power and light are all external control wiring

diagrams

Operation method:

j) Shortconnect the 8 and 9 pins on the INTERFACE 24 pins (the control board is powered on);

- k) Open the laser clientware;
- 1) Click "the guide laser ON" button to view the guide laser;
- m) Open the AD mode, external modulation mode, turn off the external enable.
- n) Waiting "Ready";
- o) When the internal output frequency occupation ratio of the laser, set out the light frequency/duty cycle/pulse width; (out of the output of the light and the output ratio of the upper machine software set by the 15.16 -footed signal and the upper machine software); the internal output frequency of the laser is required for At the time of occupation ratio, the default setting parameter is 100Hz, and the duty cycle is 100%;
- p) Control board card output analog (12, 14 pin) and outlet signals (15, 16 pin).
- 4.8.2.5 In the external control mode, the power simulation amount is set in external settings, external modulation mode, external enable

Figure23 In the external control mode, the power, light, and enable all control wiring diagrams

Operation method:

- q) Shortconnect the 8 and 9 pins on the INTERFACE 24 pins (the control board is powered on);
- r) Open the laser clientware;
- s) Click "the guide laser ON" button to view the guide laser;
- t) Open the AD mode, the external enable, the external modulation mode;
- u) On Click on the main power ON;
- v) Waiting "Ready";
- w) Interface 24 stitches on 18 pin input rising edges;
- x) When the internal output frequency occupation ratio of the laser is required, set out the light frequency/duty cycle/pulse width; (out of the output of the light and the output of the output of the 15.16 -pin and the output ratio of the upper machine software); no internal output inside the laser is required When the frequency occupation ratio, the default setting parameter is 100Hz and the duty cycle is 100%.
- y) Control board card output analog (12, 14 pin) and outlet signals (15, 16 pin).

### 4.8.2.6 Modification mode and Gate mode

Modification mode: When the duty cycle of the internal frequency of the laser is set to 100%, the laser works in the external modulation mode.

Gate mode: When the duty occupation ratio of the internal frequency of the laser is less than 100%, the laser works in the internal modulation mode. Stop the internal pulse occurring;

### 4.9 Guide laser control

## 4.11 Modulation signal requirements

The modulation frequency range of the RFL-C4000S-CE laser is 1-20000Hz, and the minimum pulse width of the laser must be greater than or equal to 160µs, reference value of laser frequency and duty cycle setting is shown in Table 11.

Frequency 20% 95% 90% 80% 70% 65% 55% 45% 40% 25% 15% 10% Vein 60% 50% 35% 30% Duty ratio 5000Hz 190µs 180µs 160µs

### 4.12 Steps of shutting down

Please turn off the laser in the order below:

- a) Turn off the emission;
- b) Disconnect the air switch;
- c) Turn off the cold water machine;
- d) Cover the output head protection cap;

### 4.13 Bluetooth app operation description

## 4.13.1 Log in

After opening the single -mode laser app, there is an account password login page, as shown in Figure 28:

Figure28 login interface

## 4.13.2 Connect

After entering the login interface, enter the mobile phone number and password, and then click the login. After the login is successful, enter the APP connection page, as shown in Figure 29:

Figure29 Verification code login interface

Open the Bluetooth switch of the single -mode laser app. If there is a Bluetooth device nearby, ensure that the switch of the Bluetooth device is turned on and click the "Search" button on the connection page.

Figure30 connect

Click the "Connection" on the right side of the searched Bluetooth device to enter the connection state, as shown in Figure 31:

Figure31 connecting

## 4.13.3 Equipment

After the connection is successful, enter the laser device-status interface, as shown in Figure 32:

Figure32 device status

The device status page mainly includes the main power supply, equipment, alarm, and light state display, as well as the state of light percentage, light power, laser temperature status, and the state of emergency stop, REM, laser enablement, red light display, and laser device, and laser The specific state and some parameter values are displayed.

There is also a device-alarm page, as shown in Figure 33:

Figure33Equipment-alarm

If the device alarm page is connected to the laser, the laser is not alarm, and the interface will display "No alarm, check the historical records!", If there is a alarm state, the specific title of the alarm will be displayed.

The state display of the laser also has the setting function that supports some parameters. It can be visible in the device-settings interface, as shown in Figure 34:

### 4.13.5 Software introduction

The single -mode laser app is a mobile software that can be connected to the laser through Bluetooth to facilitate the after -sales, maintenance, and commissioning engineers, etc., without portable notebooks, you can use the single -mode laser app installed on Android phones to and the laser. Connect, read the state of the laser or set some parameters, which is conducive to the rapid, effective and convenient solution to some problems in the use of laser use.

### **5** Alarms and Solutions

#### 5.1 Alarms Display

Connect the computer and open the host computer software, after the laser and the client software establish normal communication. All alarm states of the laser can be displayed on the host computer software interface, as shown in Figure 41. When the internal temperature of the laser is abnormal, the power is abnormal, the scattered light is abnormal, the power supply is abnormal, the condensation is abnormal, the flow rate is abnormal, etc., the laser will alarm.

Figure41Thehomepage of the clientware

If any alarm occurs (except for Interlock alarm)when the laser is running, the clientware will display the alarm that occurs, and the ALARM light (yellow) on the front panel of the laser will light up, the laser will stop emitting and lock.

When the Interlock is abnormal, the output of Ready signal is low, and the Interlock state is abnormal in the clientware, but the laser is not locked, and the ALARM light (yellow) is not lit. Theoutput of Ready signal is on high level when the Interlock is normal.

### 5.2 Alarm solutions

The instructions and solutions of alarms are as follows:

Alarm name	Alarm instructions and solutions
T1/T2 Alarm	Instruction: Low temperature/high temperature alarm of the laser. The sensor in the laser detects an abnormal temperature inside the laser. A high-temperature / low-temperature error occurs when the temperature at the monitoring point exceeds the set upper / lower limit. Solution: High temperature alarm,please check if the water-cooling system is normally working, the water temperature is set correctly, and the water connection is correct. When the water cooling system works normally and the water temperature drops below 30°C, restart the laser.

Table 12 Instructions and solutions for alarms of laser

Low temperature alarm, please check if the actual water temperature of water is too low. In addition, a low ambient temperature may also cause a litemperature alarm when the laser is cold. Please wait until the water rises above 10°C.         Instruction:	
	ter
The water flow rate of the laser alarms. The current water flow rate detection inside the laser is lower than the required value, and there is a safety risk.	ed
Solution:	
Laser Water flow Stop using the laser immediately.Please check the output model and work status of the laser water cooler and clean the laser water filter mod	-
according to the laser operation requirements in the section 3.3 cool	
	0
System Installation and Requirements. It is recommended to clean the wa	
cooler and the water inlet filter assembly regularly, and replace the cool	ng
water.	
Instruction:	
Scattering light alarm, when the intensity of ambient light inside the la	
exceeds the set value, the scattering light alarm will be generated, and the la	
Scattered Light emission function will be locked (cannot be unlocked). The scattered li	ght
Alarm alarm only occurs when the laser emission.	
Solution:	
Please restart the laser, check the guide laser state of the laser, and through	
clientware "from the control module" reading the scattered light monitor	ng
voltage value, and contact Raycus.	
Instruction:	
The alarm is generated when the emission of the laser cannot reach the	set
Laser Power Alarm value. Power error occurs only when the laser is emitting.	
Solution:	
Please restart the laser, check the red light state of the laser, and cont	ict
Raycus.	
Instruction:	
ACDC Error, failure of the laser power supply or sudden power failure of	he
ACDC Alarm power supply system may cause an alarm.	
Solution:	
Check if the input AC voltage is normal. Restart the laser, if this en	or
continues to occur, please contact Raycus.	
Instruction:	
Current Driver Current Driver Alarm, this error occurs when the constant current driver bo	rd
Alarm inside the laser is abnormal.	

Restart the laser, If this error continues to occur, please contact Raycus

In addition to the above, if there are any questions or errors inusing of the laser, you can contactRaycus to get help.

### 6 Warranty, Return and Maintenance

#### 6.1 General Warranty

Raycus warrants that all Raycus fiber laserproducts are conformed to applicable product specifications under normal use and are free from defects in materials and workmanship. The warranties start on the date of shipment from Raycus for a period of time as set forth in the applicable purchase contracts or product specifications. Raycus has the right to choose to repair or replace any product that proves to be defective in materials and workmanship selectively during the warranty period. Only products with particular defects are under warranty. Raycus reserves the right to issue a credit note for any defective products produced in normal conditions.

### 6.2 Limitations of Warranty

The warranty does not cover the maintenance or reimbursement of our productof which the problem results from tampering, disassembling, misuse, accident, modification, unsuitable physical or operating environment, improper maintenance, damages caused by those who are not from Raycus due to excessive use or not following the instructions.Customer has the responsibility to understand and follow this instruction to use the device. Any damage caused by fault operating is not warranted. Accessories and fiber connectors are excluded from this warranty.

According to the warranty, client should write to us within 31 days after the defect is discovered. This warranty does not involve any other party, including specified buyer, end-user or customer and any parts, equipment or other products produced by other companies.

It is the customer's responsibility to understand and follow operating instructions in this UserGuide and specifications prior to operation-failure to do so may void this warranty. Accessories and fiber connectors are not covered by this warranty.

### 6.3 Service and Repair

- a) Do not open the device. There are no user serviceable parts, equipment orassemblies for user in this product. All service and maintenance shall be performed by qualified Raycus personnel.
- b) Please contact Raycus as soon as possible when problems under warranty about maintenance happened to the product.
- c) The product returned with permission should be placed in a suitable container.
- d) If any damage happened to the product, please notify the carrier in document immediately.

We reserve the right to make changes in design or constructions of any of our products at anytime without incurring any obligation to make changes or install the same on unitspreviouslypurchased.

All the items about warranty and service above provided by Raycus are for user's reference; formal contents about warranty and service are subject to the contract.
